

Amazon S3 :

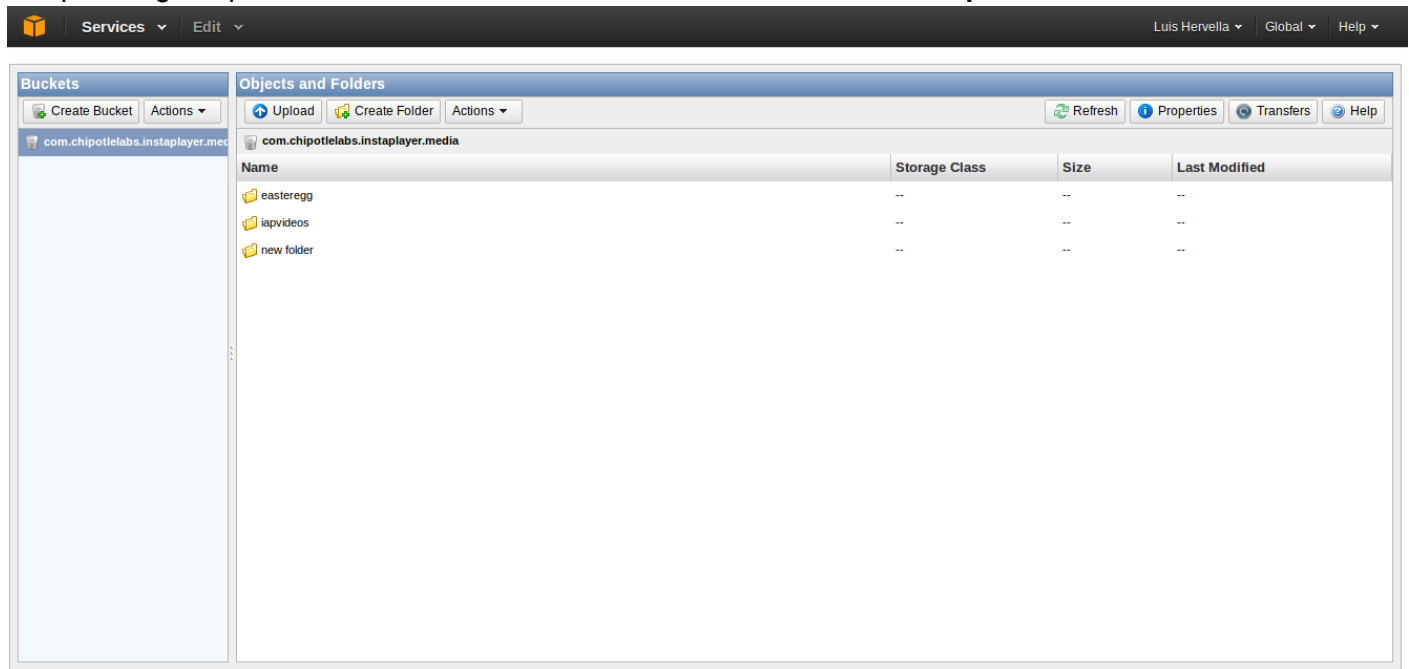

1. Below is the screenshot of the screen where a bucket with two folders .

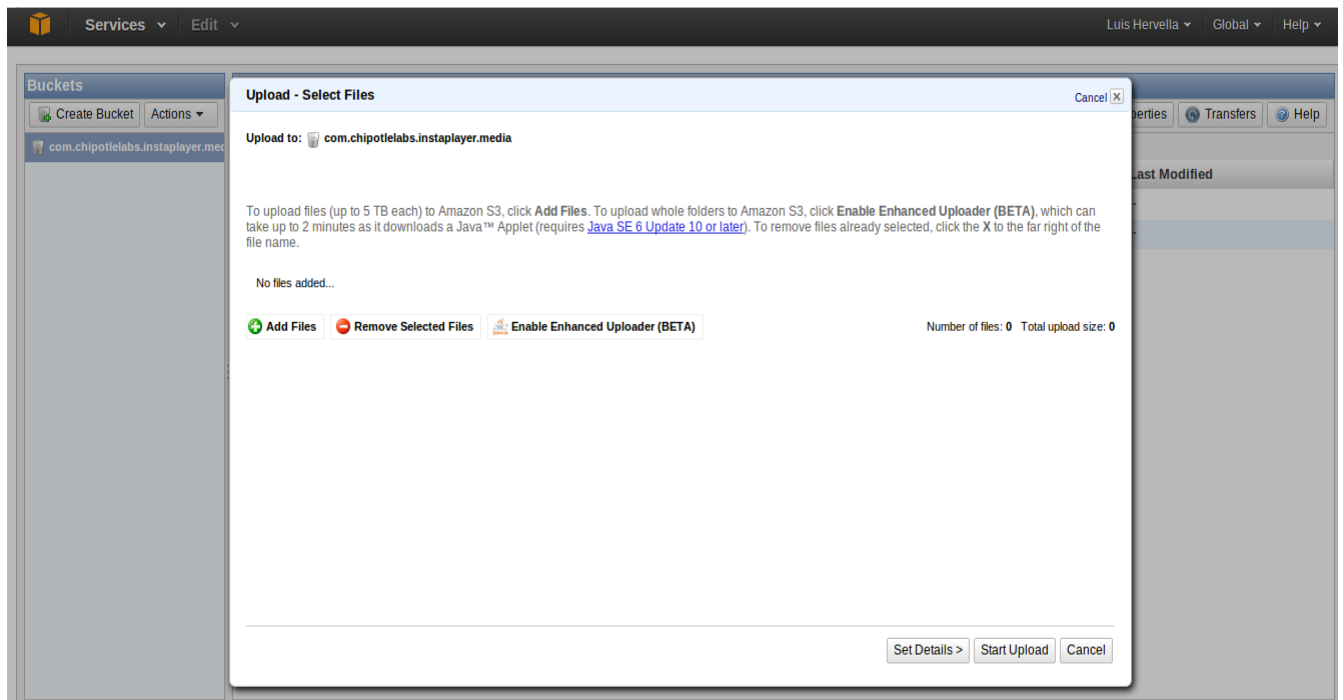

2. How to create a folder in a bucket. Just click on **Create Folder** and give a name. Here it is **New Folder**

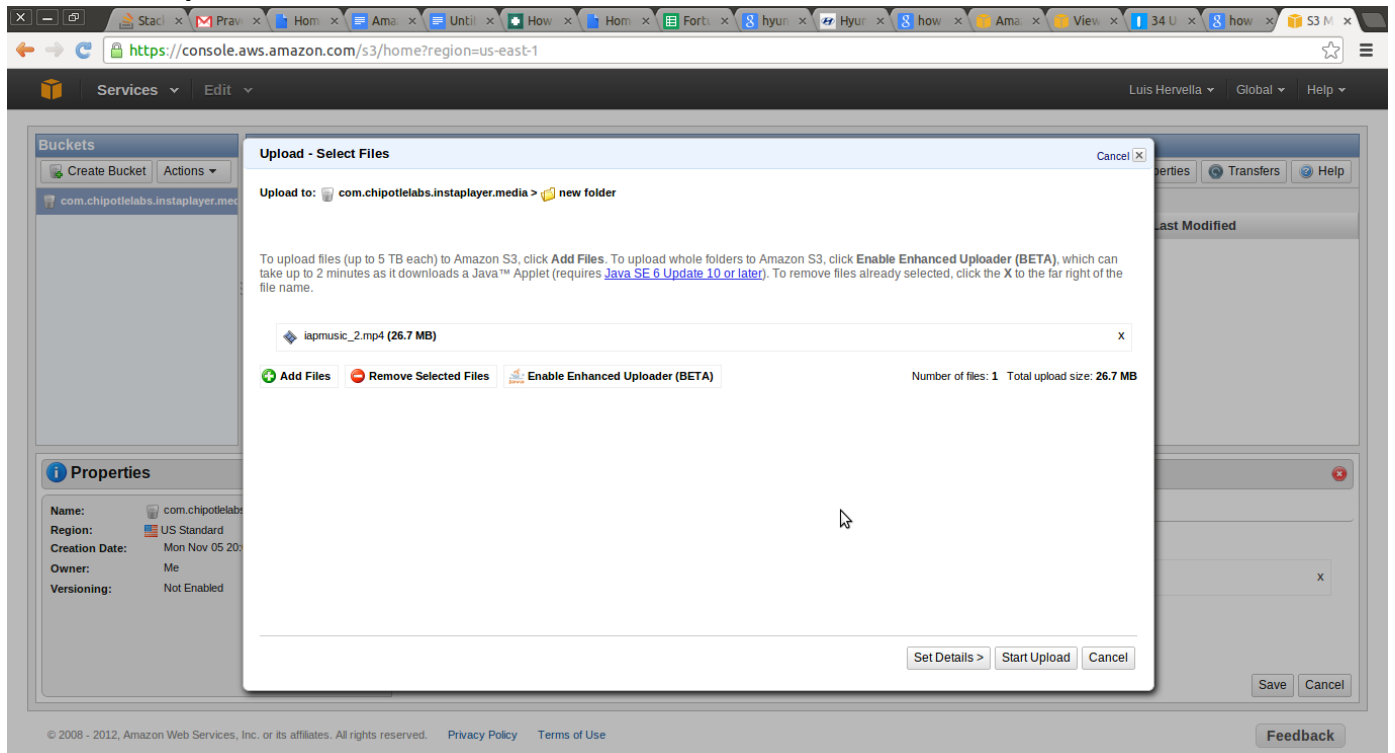

3. Uploading a mp4 file in **new folder** . select **new folder** and then click **Upload**

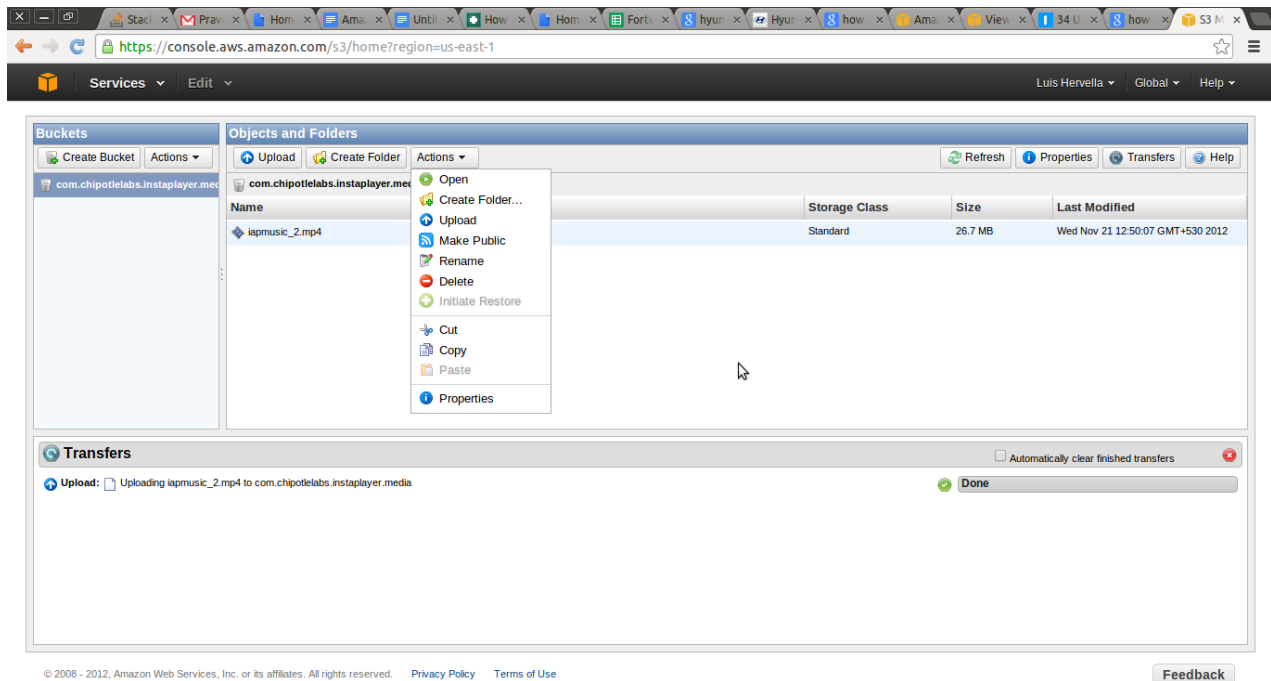

once u click **upload** you will see the below screen, click **Add Files**

4. Browse the local and the file , here i have added **iapmusic_2.mp4**. Once you select then click **Start Upload**

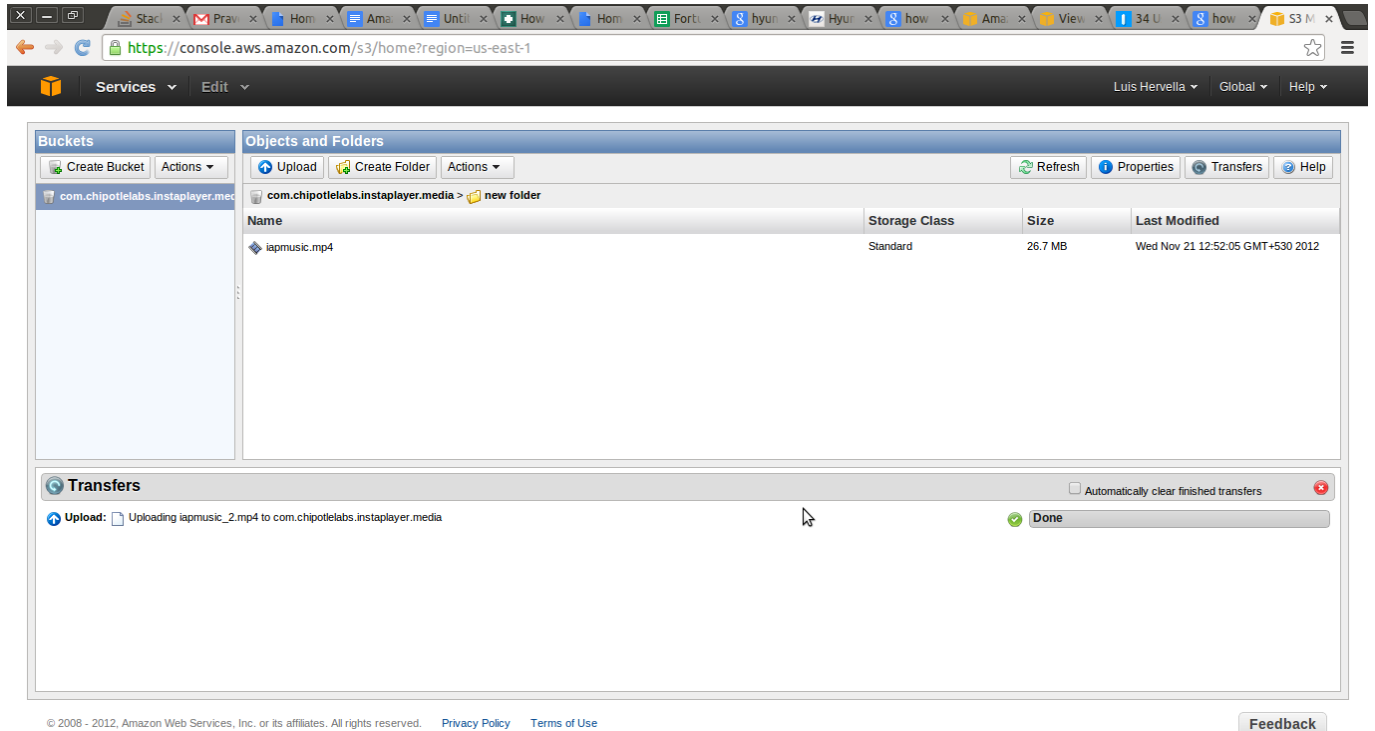

5. Once the file is uploaded we can do set of actions on it like Delete , renaming and others. click on **Actions**

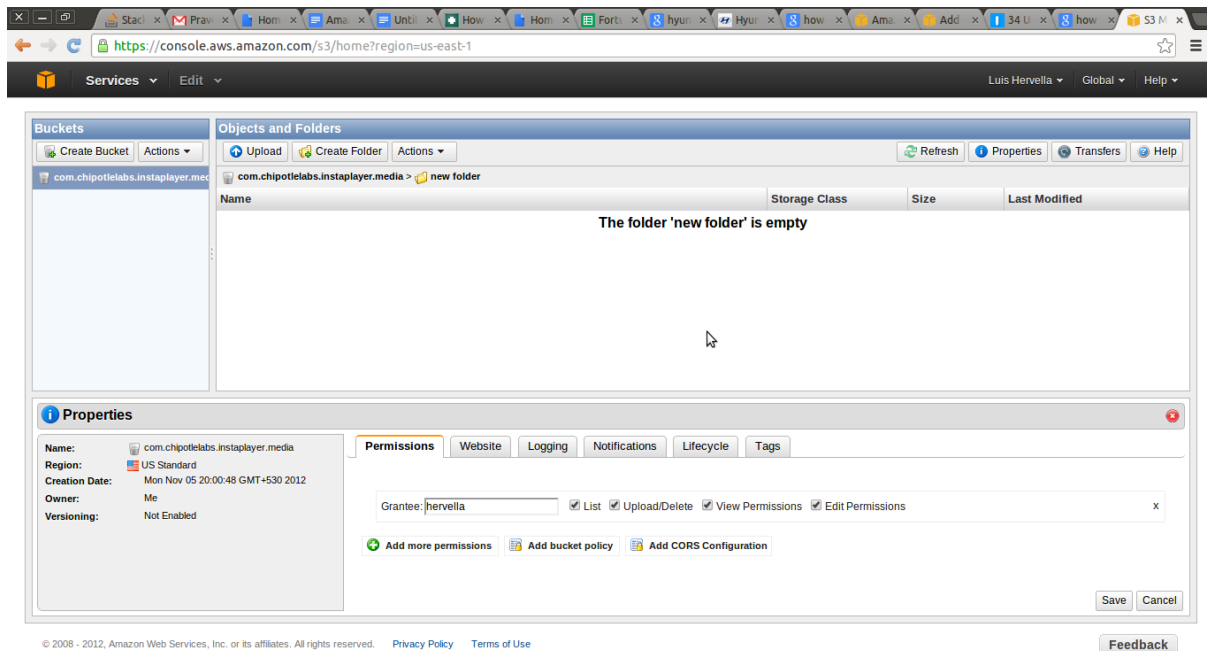

6. We will perform Renaming now , Once select the file and click **Actions** , select **Rename** and give the refracted name. Here I have changed **iapmusic_2.mp4** to **iapmusic.mp4**.

In the Same way **Delete** can also be performed.

7. **Permissions:** here click properties and will have a rollover in which we can edit permissions and other privacy settings , as shown below.

In the Below screenshot - when selected properties , we can get the “url” for uploaded file. Here it is link : “...”

Next tab is the permissions , where we can have permissions like open download, view permissions and edit permissions. We can also add more permissions.

To make a image/file public or private , the steps are

1. select the file for which permissions are required.

2. click on properties
3. We get a rollover , in which select permissions tab .
4. Select Everyone (As shown in screenshot below)
5. Then tick checkboxes according to your requirements and save. (typically Open/Download is required for normal users, and View/Edit permissions for Admins)

The screenshot shows the AWS Management Console interface. The top navigation bar includes the AWS logo, 'Services' and 'Edit' dropdowns, and the user name 'Luis Hervella' with 'Global' and 'Help' links. The main content area is divided into two panels. The left panel, titled 'Buckets', shows a list of buckets with 'com.chipotelabs.instaplayer.media' selected. The right panel, titled 'Objects and Folders', shows a list of objects with 'iapmusic_2.mp4' selected. Below these panels is the 'Properties' section, which has three tabs: 'Details', 'Permissions', and 'Metadata'. The 'Permissions' tab is active, showing a list of grantees. The first grantee is 'hervella' with checkboxes for 'Open/Download', 'View Permissions', and 'Edit Permissions'. The second grantee is 'Everyone' with checkboxes for 'Open/Download', 'View Permissions', and 'Edit Permissions'. A dropdown menu is open for the 'Everyone' grantee, showing options: 'Everyone', 'Authenticated Users', 'Log Delivery', 'Me', and 'hervella'. The 'Everyone' option is selected. At the bottom of the console, there is a copyright notice: '© 2008 - 2012, Amazon Web Services, Inc. or its affiliates. All rights reserved.' and a 'Feedback' button.
